Connect your accounts (Labs 10-12) — optional, about 20 minutes

Claude Cowork for Digital Marketing · Day 2 · Use Claude Code

Every lab works in **dry-run** mode without this. Connect only accounts you own, and only test pages and channels. Tokens go in .env — never in a prompt.

LinkedIn (your own profile)

1. linkedin.com/developers -> Create app (needs a LinkedIn Page; a test page is fine).
2. Products -> add **Share on LinkedIn** and **Sign In with LinkedIn using OpenID Connect**.
3. Auth -> OAuth 2.0 tools -> create a token with scopes openid, profile, w_member_social. Paste it after LINKEDIN_ACCESS_TOKEN= in .env and save.
4. Your author ID: ask the agent "Look up my LinkedIn author ID with the token in .env and fill it in. Do not show me the token."
5. Leave LINKEDIN_VERSION as it is.

Facebook Page

6. Create a test Facebook Page you manage.
7. developers.facebook.com -> Create app -> Business.
8. Graph API Explorer -> pick the app -> permissions pages_manage_posts, pages_read_engagement and pages_show_list -> Generate token -> choose your Page.
9. Click "Get Page Access Token"; paste it after FB_PAGE_TOKEN= in .env, and your Page ID (Page -> About -> Page transparency) after FB_PAGE_ID=. The key lasts about an hour, so make it just before you post.

YouTube

10. console.cloud.google.com -> new project -> enable YouTube Data API v3.
11. OAuth consent screen: External, add yourself as a test user.
12. Credentials -> OAuth client ID -> Desktop app. Copy id and secret.

13. Ask the agent: "Help me sign in to YouTube once and save the refresh token in .env as YOUTUBE_REFRESH_TOKEN. Do not show me the token."
14. Uploads stay **private** until you make them public in YouTube Studio.
